High-Temperature Small-signal N-channel MOSFET

General description

The CHT-SNMOS-80 is a high voltage 80V N-channel small-signal MOSFET designed to achieve high performance in an extremely wide temperature range: typical operation temperature goes from -55°C to 225°C.

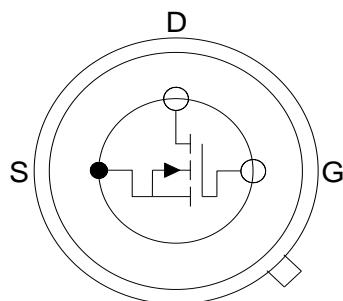

Applications

Sensor interfaces, such as piezoelectric sensor, guard amplifiers, switches of high and medium impedance loads, level-shifters and high temperature diodes.

Features

- Qualified from -55 to +225°C (T_j)
- Drain voltage up to 80V
- Typ output current 300mA @ 225°C
- R_{DSon} = 15Ω @ 225°C
- V_{GS} = -0.5V to +5.5V
- Reverse ESD diode between gate and source.
- Validated at 225°C for 1000 hours (and still on-going)
- Available in TO18 package (other packages available upon request).

Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Frequent or extended exposure to absolute maximum rating conditions or above may affect device reliability.

Application Note: CHT-SNMOS80 used as a diode

General description

CHT-SNMOS80 can be used as high temperature general purpose diode able to sustain reverse voltages of up to 80V. The typical operation temperature range goes from -55°C to 225°C.

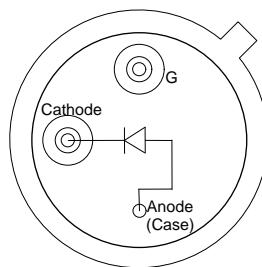

Features

- Qualified from -55 to +225°C (T_j)
- Operational up to +250°C (T_j)
- Reverse voltage up to 80V
- Forward surge current 200mA @ 225°C
- Low reverse leakage current 4 µA @ 225°C
- Available in TO18 package (other packages available upon request).

Applications

Rectification, voltage blocking, general purpose switching.
