

# High Temperature Configurable Logic Gates Datasheet

Version: 1.2

15-Dec-23

(Last Modification Date)

(see note 1)

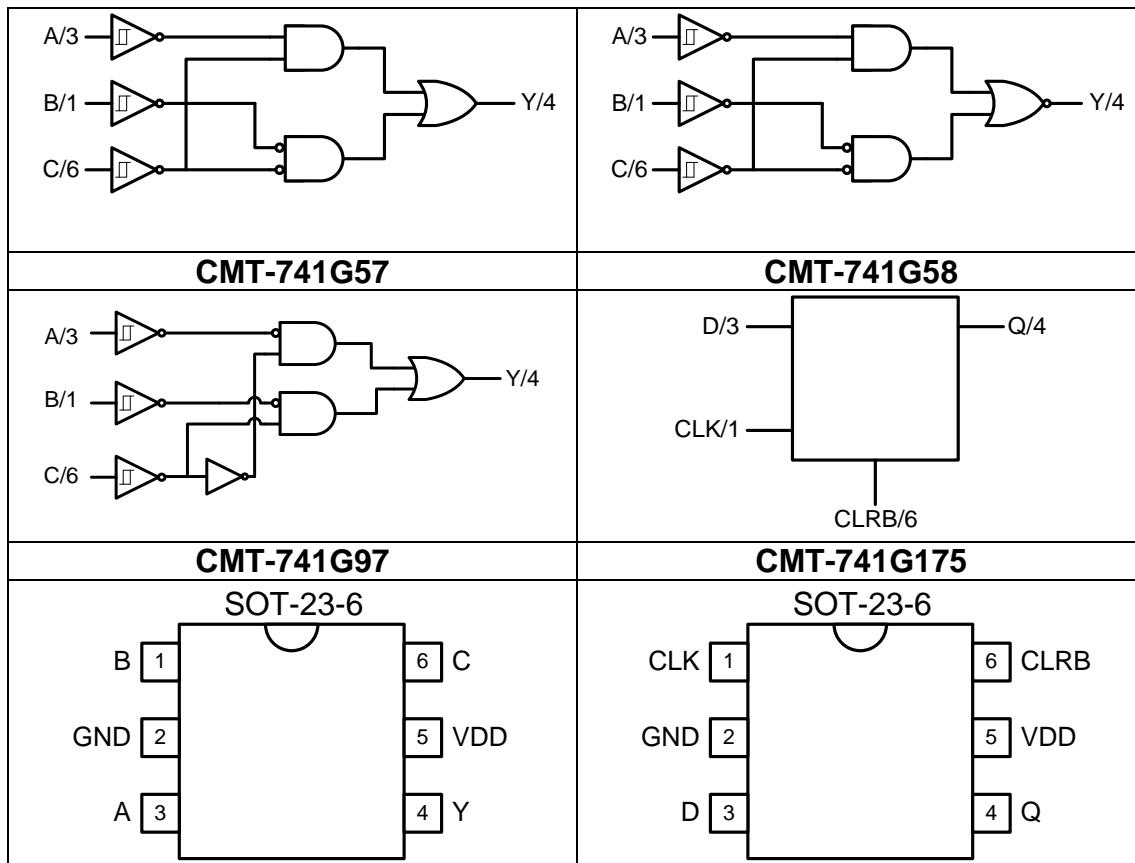

## General description

The CMT-741Gxx are 4 high temperature configurable devices enabling 13 different logic functions: INV, BUFFER, AND, AND w/ inverted input, NAND, NAND w/ inverted input, OR, NOR, NOR w/ inverted input, XOR, NXOR, MUX and D Flip-Flop.

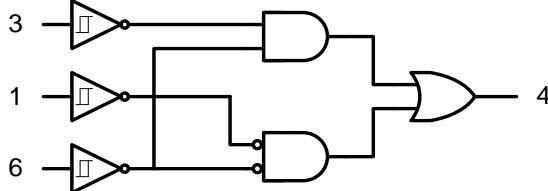

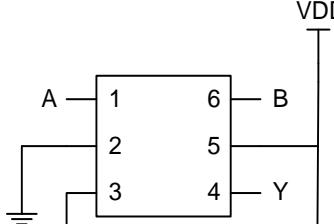

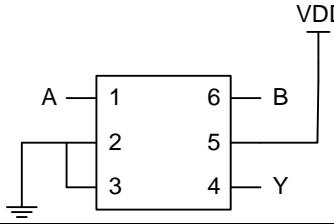

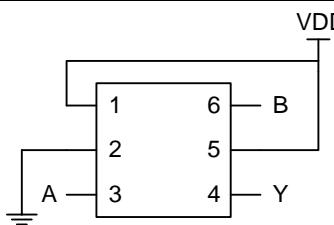

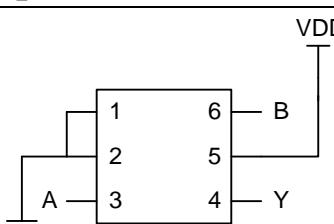

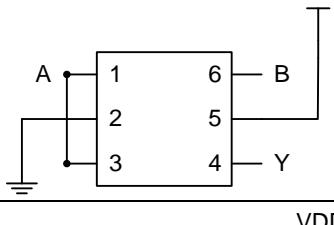

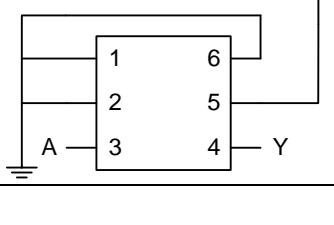

These devices are optimized for high-end industrial applications and specified for operating junction temperature from -55°C up to +175°C (T<sub>j</sub>).

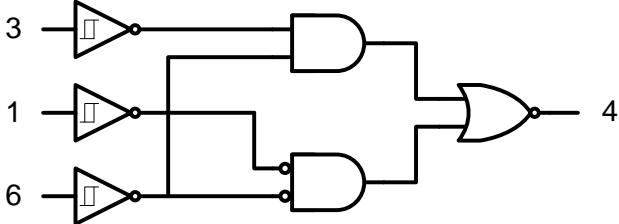

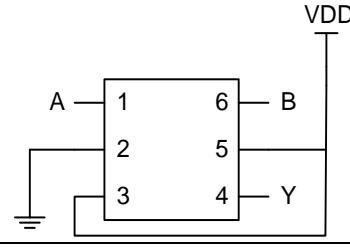

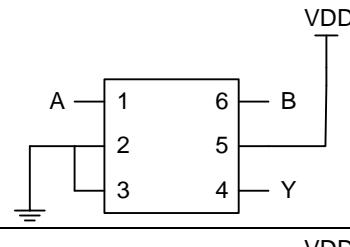

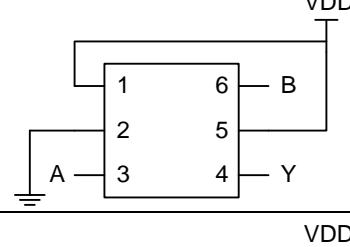

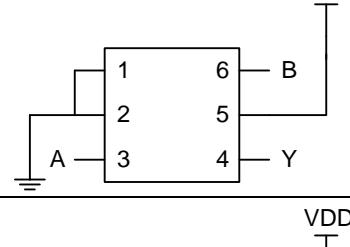

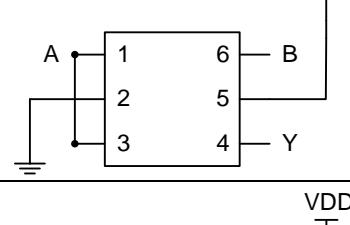

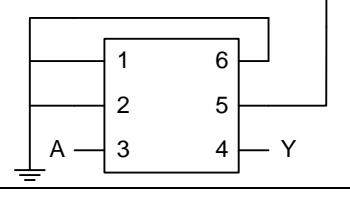

## Features

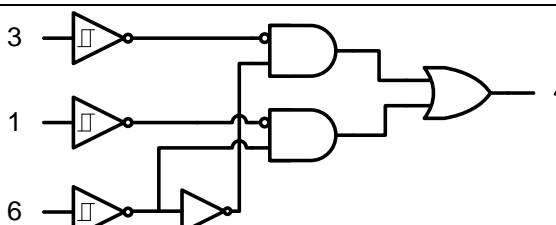

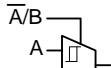

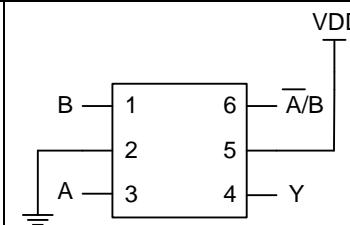

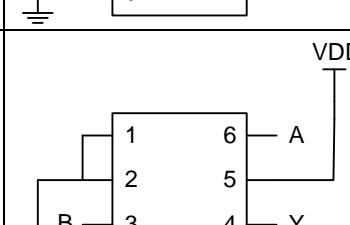

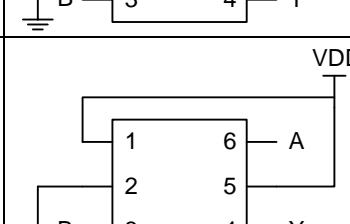

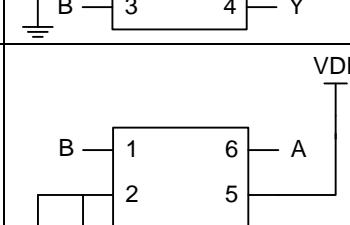

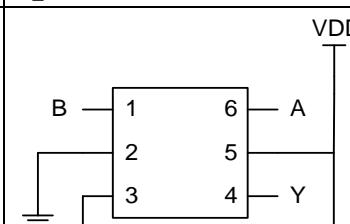

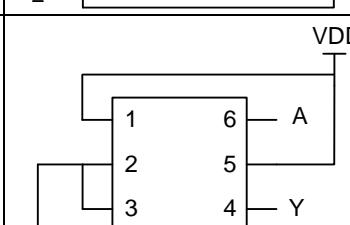

- Operating junction temperature: from -55°C to +175°C (T<sub>j</sub>)
- Supply voltage: 1.65V to 5.5V
- Inputs can be driven by 3.3V or 5V signals, even for lower supply voltage
- Schmitt trigger inputs for high immunity to slow changing signals
- ± 16 mA output drive current
- CMOS low power consumption
- ESD: 2000V HBM or 200V MM
- Lead Free Finish & RoHS compliant
- Tiny package: SOT-23 6 leads

Note 1 Please always refer to the latest datasheet version available at

### Electrical Characteristics

| Symbol        | Parameter                                                                                  | Test conditions | $V_{DD}$  | Min. | Typ  | Max. | Units |
|---------------|--------------------------------------------------------------------------------------------|-----------------|-----------|------|------|------|-------|
| CI            |                                                                                            |                 | 3.3       |      | 2.7  |      | pF    |
| $C_{PD}$      | Power dissipation capacitance                                                              | F= 10 MHz       | 1.8 to 5V |      | 7.43 |      | pF    |
| $\Theta_{JA}$ | Device mounted on FR-4 substrate PC board, 2oz copper, with minimum recommended pad layout |                 |           |      | 204  |      | °C/W  |
| $\Theta_{JC}$ |                                                                                            |                 |           |      | 52   |      | °C/W  |

Note 2 : Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Frequent or extended exposure to absolute maximum rating conditions or above may affect device reliability.

## CMT-741G57/CMT-741G58/CMT-741G97/CMT-741G175 Electrical Characteristics

**Bold underlined** values indicate values over the whole temperature range (-55°C < T<sub>J</sub> < +175°C); All typical values are at T<sub>A</sub>=25°C

### Parameter Measurement Information (notes3,4)

From Output  
Under Test

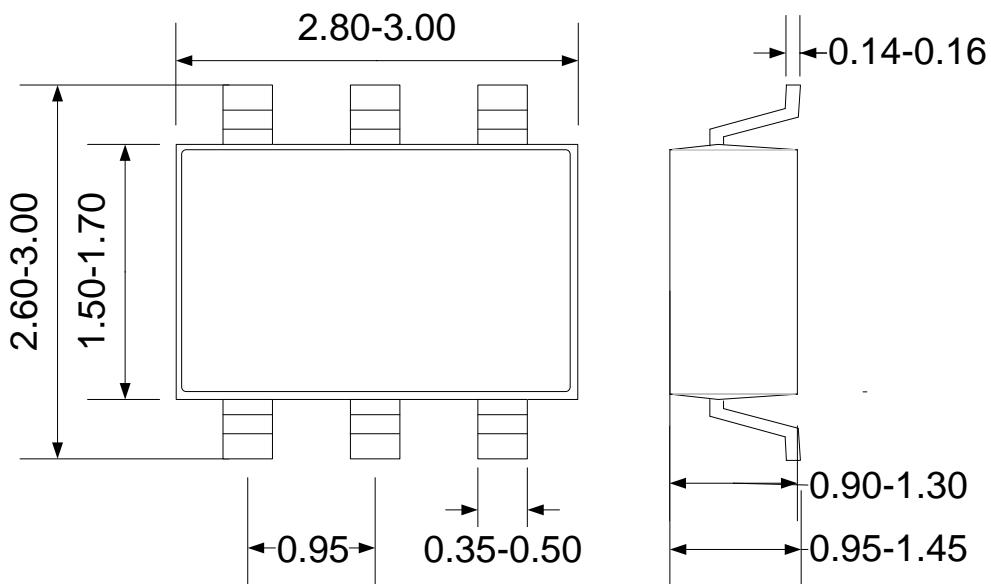

| $V_{DD}$         | Inputs   |                   | $V_M$      | $C_L$ | $R_L$        |
|------------------|----------|-------------------|------------|-------|--------------|
|                  | $V_I$    | $t_r/t_f$         |            |       |              |
| $1.8V \pm 0.15V$ | $V_{DD}$ | $\leq 2\text{ns}$ | $V_{DD}/2$ | 30pF  | $1000\Omega$ |
| $2.5V \pm 0.2V$  |          |                   |            | 30pF  | $500\Omega$  |
| $3.3V \pm 0.3V$  |          |                   |            | 50pF  | $500\Omega$  |
| $5V \pm 0.5V$    |          |                   |            | 50pF  | $500\Omega$  |

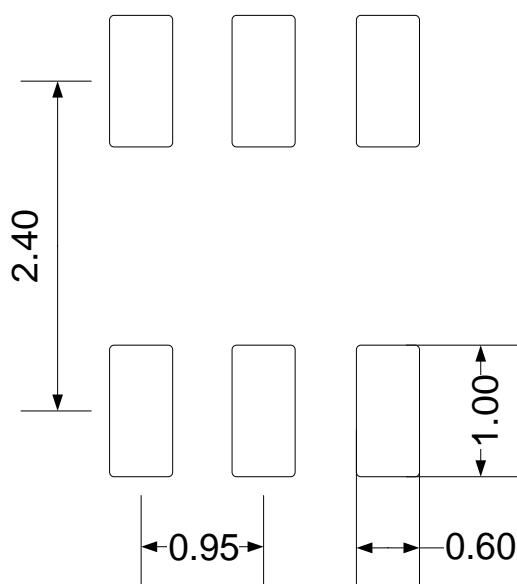

Note 3  $C_L$  load capacitance includes PCB and probe capacitance  
Note 4 :  $t_{PHL}$  and  $t_{PLH}$  are the same as  $t_{PD}$
